Declaration number

NEPD-390-276-EN

This declaration is based on Product Category Rules:

NPCR 003:2015 Seating

Statements

The owner of the declaration shall be liable for the underlying information and evidence.
 EPD Norway shall not be liable with respect to manufacturer, life cycle assessment data and evidences.

Declared unit:

One produced unit of seating ready to leave the factory gate.

Declared unit with option:

Option: BA Wheels

Functional unit:

Owner of the declaration

Product

Product description:

Back App 2.0 is a chair designed to stimulate movement when sitting in order to avoid diseases related to many hours of sitting still every day. The feet are placed on a foot ring which brings the whole body to balance on the ball at the center of the base. The chair can be equipped with wheels by placing it on a wheel-plate.

Product specification

Materials	BA 2.0 w/o wheels		BA 2.0 w/ wheels	
	g	%	g	%
Steel	2234	23 %	2234	14 %
Aluminum	2821	29 %	7684	49 %

Total	9593	100 %	15586	100 %

Technical data:

Weight: BA 2.0 chair 9.6 kg, BA wheels 5.8 kg

SS-EN ISO 12945-2:2000 (Stare 2012), EN 1021-1 and N 1021-2 (Bergstrand 2013a), EN 1728:2012 (Anderson 2013), BS 5852: Part 1 (Bergstrand 2013b).

Market:

Europe

Reference service life:

15 years

LCA: Calculation rules

Declared unit:

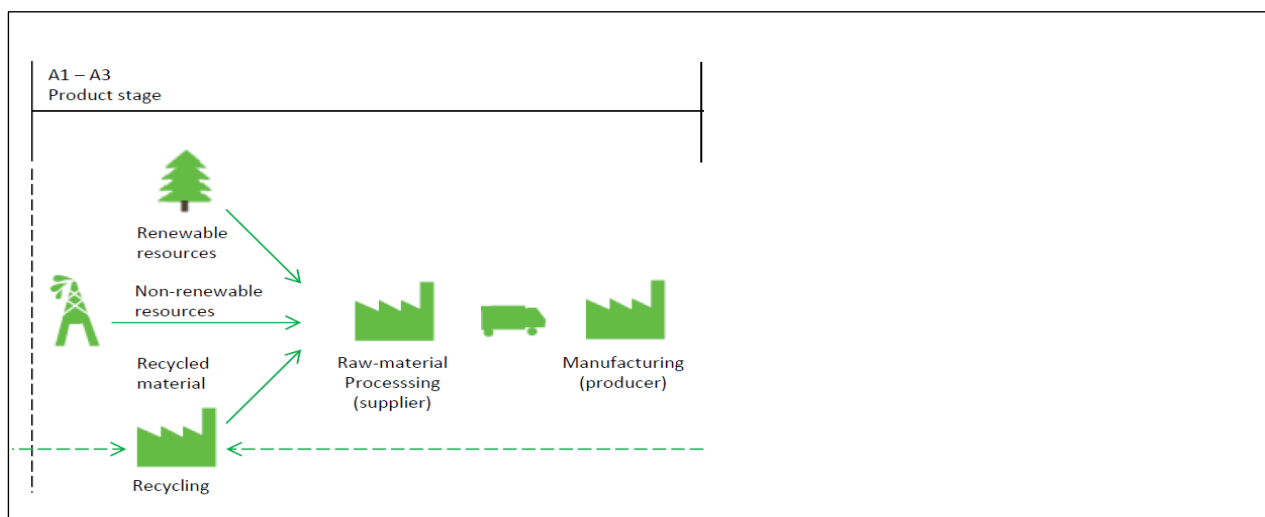

One produced unit of seating ready to leave the factory gate, with optional wheels.

Chair components are assembled, the tilt damping device is fastened by double-sided tape, and the chair packed for distribution to the customer in the Exmo AB facilities in Anderstorp Sweden.

System boundary:

Life cycle stages included are illustrated in the Figure 1. Life cycle stages included are raw material extraction and processing, transport to the manufacturer and manufacturing of seating solution. Data for production year 2013 and 2014 has been used. The chair is assembled in Sweden, and the parts are delivered from manufacturers mainly in Europe (Sweden, Italy, Lithuania, Poland, Romania and Germany).

Figure 1 shows a schematic view of the processes included in the declaration.

Data quality:

Specific data have been collected from suppliers and manufacturers. Where specific data was not available, generic data from Ecoinvent 3 and Østfold Research's database have been used. Ecoinvent 3 is used as basis for raw material and energy carrier production. The generic data from Ecoinvent is of various age. The specific data were collected from the raw material manufacturers and are from 2013 and 2014.

Allocation:

The allocation is made in accordance with the provisions of ISO 14025. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Cut-off criteria:

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances.

LCA: Scenarios and additional technical information

There are no scenarios included for the life cycle stages A4-D

LCA: Results

The raw material supply is the life cycle module with the highest impact. Amongst the raw materials, aluminum used for the chair base is the most influential in almost all impact categories.

System boundaries (X=included, MND=module not declared, MNR=module not relevant)

Dangerous substances

- The product contains no substances given by the REACH Candidate list (The European parliament 2006, European Chemicals Agency 2015) or the Norwegian priority list (Norwegian Environment Agency 2015).
- The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.
- The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
- The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskitfen, Annex III), see table.

Indoor environment

No tests have been carried out on the product concerning indoor climate

Carbon footprint

Carbon footprint has not been worked out for the product.
